

CLUTCH CABLES

Clutch cables are known to stretch and fatigue over time causing clutch actuation issues, especially after the fitment of a new clutch kit. Inspection of the clutch cable is a critical step in diagnosing clutch release faults and is highly recommended when installing any new clutch with a cable operation.

ACS' clutch cables cover all popular makes and models and have been manufactured to meet exceptional quality standards for durability and performance.

- High Quality Replacements
- Stock Holding Throughout Australia
- Extensive Range Coverage
- Includes All Required Componentry for Installation
- Inner Wire Lubricated as Required
