

CHECKING CLUTCH RELEASE VIDEO

Checking Clutch Release before complete reassembly of the vehicle is helpful to save time and improve efficiency in the workshop.

By checking the release of the clutch before reassembling the vehicle, it is possible to identify potential faults with hydraulics or clutch operation, saving time if the vehicle needs to be disassembled again.

ACS has developed a video explaining the procedure for this as part of the ClutchTech series. Please scan the QR code above to view the YouTube video.

“Our mission is to provide the highest Quality, Innovation & Service to our customers across Australia and around the world”
